Executive Summary

Through the allowance of Roblox and their partnership with HackerOne, we have been able to gather some interesting data on the company as a whole and some insight into some of their inner workings. Server and hosting details, IP and networking information, and employee profiling are just some of the data that has been collected and provided in this report.

Table of Contents

Organization Overview

The Roblox Corporation was founded in 2004 by David Baszucki and Erik Cassel, its headquarters is in San Mateo, California. The organization is the developer of the game Roblox, and this game is the focus of the organization. Roblox' mission is to provide a safe environment for kids to "imagine, create and play together in an immersive, user-generated 3D world." (HackerOne, 2020).

Network Structure

From data gathering as outlined in the rules of engagement, we are able to determine that the their webserver that hosts their main domain of www.roblox.com runs a Linux based operating system. They also appear to be running SSL and P3P technology on this web server (Netcraft, 2020). From the data gathered it appears that Roblox also hosts their own web server as well as host a number of other services from their network ranges such as a VPN service, a Wiki, mail, and of course their web servers. As for trying to determine that programming language they use, we were unable to determine this.

We were able to determine a list of IP ranges that they appear to be using.

- 128.116.0.0/17
- 208.185.173.0/24
- 209.15.226.0/24
- 54.0.0.0/8
- 67.0.0.0/8
- 66.0.0.0/8
- 207.58.160.0/24

Executive Team Profile

There were several key employees freely listed on their corporate website and we profiled two of these individuals. The first was David Baszucki, one of the founders and the current CEO. From information mostly turned up by search engines, we were able to determine a range of compensation for the executives as well as an average compensation amount. It seems that the most compensated executive makes around $503,500 annually and the base salary of an executive is around $194,612 with an average for all executives being around $207,416

(Comparably, 2020). We were able gather some personal information on David from his LinkedIn page, such as his wife's name, the number of kids he has, and the university he graduated from (LinkedIn, 2020). Other searches were able to help us narrow down what his corporate email is, david.baszucki@corp.roblox.com.

We also profiled Tami Bhaumik, the VP of Marketing and Digital Civility. From search inquiries and finding her LinkedIn page, we were able to figure out her company email, tami.bhaumik@roblox.com, that she is a board member of the Family Online Safety Institute, as well as what university she graduated from. From what we can tell on both of their professional social media pages, they do not appear to be looking for new lines of work.

Recon Results

As we continued to gather data on the target, we were unable to locate any corporate documents, passwords, or other sensitive materials of interest. We did discover that Roblox is partnered with Tencent Holdings Limited, the Chinese megacorp, to bring Roblox into the Chinese market given heavy censorship due to the People's Republic of China strict enforcement of those censorships. They have also partnered with BBC Studios to incorporate the Dr. Who franchise into their game as a means of widening their clientele pool.

Points of Interest

Some key points of interest during our recon was that we were able to identify 658 different IP addresses in use and directly associated to their main host of roblox.com. A list of these IPs is provided in *Appendix 1* below.

Tools Used

Among the different tools used for this recon exercise, we used *theHarvester* program as well as *Recon-ng*. Both these tools help to flush out as well as confirm data that was gathered by other tools. Both outputs of these two programs is listed in *Appendix 2* and *Appendix 3* below. Google searches were also used, and a documented list of the search strings and results is provided in *Appendix 4* below.

Social Engineering and Physical Penetration

As the data gathered remotely about the physical building and layout, we were able to precure the address of the corporate headquarters, 970 Park Pl, San Mateo, CA 94403. Using Google Street view, we were also able to determine that the building had visible entrances including an underground parking garage. We made out one external security camera on the building as well a camera on the ATM near the front entrance of the building.

We were unable to confirm, but given the nature of the business, it is assumed that there is badge restricted access once you enter the building. We were able to confirm that the underground parking requires badge access. As for general employees, based on a company group photo found we determined that there is not any uniform and that the dress code appears to be casual to business casual.
